

SKINPULSE SHR

Super Hair Removal

Incorporating

e-motion Technology

Advanced aesthetic multi-treatments

CE Certified
Full Warranty
Certified
Training

SHR - SUPER HAIR REMOVAL

Pain free - all skin types - tanned skin
All hair colours - 2 x faster treatments

SSR - SUPER SKIN REJUVENATION

Pigmentation, wrinkle reduction, skin rejuvenation,
vascular lesions & acne

- PAIN FREE • ALL SKIN TYPES • TANNED SKIN
- ALL HAIR COLOURS • FASTER TREATMENTS
- SAFE & EFFECTIVE

The Next Generation

Better & faster
than laser & IPL

SHR & e-motion Technology - A breakthrough in hair removal & skin rejuvenation

SHR: Super Hair Removal

SHR is the proven method of permanent hair reduction that allows for safer, **pain free** treatments to a wide client base. SHR delivers low energy light (610-950nm) via rapid "pulses" - (5 per second) to gently, effectively and efficiently traumatise the hair stem cells thus preventing re-growth. Research has shown that this gentle & incremental heating process is more efficient than the high intensity & high temperatures (70c) that are associated with IPL/laser, delivering better results in the treatment of permanent hair reduction. The direct to target delivery of SHR requires a comparatively low terminal temperature (45c) to be clinically effective, with little or no trauma to surrounding tissue, offering pain free and

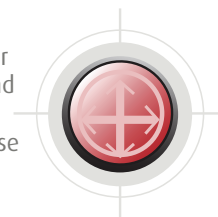

safer treatments maximising client suitability and revenues. **Combined with e-motion technology SHR & SSR deliver better, faster, safer and more gentle treatments than traditional Laser & IPL.**

ASC: Active Skin Cooling

Treatment efficiency and client comfort is further enhanced with ASC. The incorporated advanced and adjustable water cooling allows for head pieces to be chilled to -4° c. ASC enhances clinical results, whilst ensuring no discomfort or epidermal damage to clients, even for the darkest skin types.

e-motion - Technology, Fast & Effective

e-motion technology is a breakthrough in the safe & effective delivery of SHR light energy in the treatment of both hair reduction and skin rejuvenation. Incorporating a unique "wanding" action the clinician will repeatedly "sweep" the SHR hand piece over the target area whilst delivering the fast-pulse, low-energy light directly into the skin. Medium and large areas take a fraction of the time traditionally required with treatments up-to 50% shorter. Intelligent software enables simple ease of use and delivery parameters for faster more effective treatments and results.

All Skin Types

SHR gradually heats the skin until the required level is delivered directly to the hair follicle without causing trauma to skin that contains high pigment count or dark skin types. This unique targeted approach also allows for increased treatment results in fair skin and blonde hair.

Tanned Skin

The unique way that SHR affects the melanin directly in the hair follicle allows for treatments at any time of year - even on tanned skin.

SSR - Super Skin Rejuvenation

The SkinPULSE SHR platform includes separate SSR technology as standard. The SSR headpiece operating at 420-950nm - supported with integrated software allows for a new dimension in the effective treatment of:

acne, wrinkles, pigmentation, vascular lesions, and skin rejuvenation.

Accessible - Affordable - Profitable

Key advantages for operators:

- Multi treatment platform - pain free hair removal & advanced skin treatments
- Next generation technology for point of difference in treatment efficacy and client comfort
- Ease of use, fast treatment Times - low consumables - highly profitable
- Low investment Up-to 50% cheaper than comparable systems

Key advantages for clients:

- Fast pain free treatments
- Effective results for permanent hair reduction and skin conditions
- Minimal risk of side effects

SkinPULSE SHR Specifications

Technical Data

Model:	SkinPULSE SHR e-motion	ASC - Water Cooled	- 4°c /+ 10°c
Device Type:	IPL-SHR System	Lamp life	300,000 pulses
Power Supply:	230V, 50/60Hz	Dimensions (LxWxH)	45x35x95 cm
Power HR:	1-7J/cm at 5 Hz	Interface:	10" Colour touch screen
Power SR:	1-12J/cm at 2 Hz	Weight:	70kg
Timer:	1, 3, 30s on HR, 1, 3, 12s on SR	Certification	CE
